

# Query Optimization: Exercise

## Session 4

Bernhard Radke

November 13, 2017

## Lecture Evaluation

- ▶ Register for the course in TUMonline
- ▶ Evaluation will be done in the lecture on December 4
- ▶ Bring your laptop

# Homework

## Exercise 1

```

select s2.name
from studenten s1, hoeren h1, hoeren h2, studenten s2
where s1.name='Schopenhauer' and s1.matrnr=h1.matrnr
and h1.vorlnr=h2.vorlnr and h2.matrnr=s2.matrnr
and h1.matrnr<>h2.matrnr

```

*name = 'Schopenhauer'*

## Exercise 2

- ▶ When is a cross product beneficial?
- ▶ When is a bushy tree beneficial?

## Exercise 3

**Please attach the code to your submission email!**

# Join Ordering

## Join Tree

# Query Graph

```
select *  
from R1, R2, R3, R4  
where R1.a=R2.b  
      and R2.c=R3.d  
      and R3.e=R4.f
```

```
select *  
from R1, R2, R3, R4  
where R1.a=R2.b  
      and R2.c=R3.d  
      and R3.e=R4.f  
      and R4.g=R1.h
```

```
select *  
from R1, R2, R3, R4  
where R1.a=R2.b  
      and R1.c=R3.d  
      and R1.e=R4.f
```

```
select *  
from R1, R2, R3, R4  
where R1.a=R2.b  
      and R1.c=R3.d  
      and R1.e=R4.f  
      and R2.g=R3.h  
      and R2.i=R4.j  
      and R3.k=R4.l
```

## Cardinality, Selectivity and Cost Function

- ▶  $|\sigma(R)| = f_R \cdot |R|$
- ▶  $|R_1 \bowtie R_2| = f_{1,2} \cdot |R_1| |R_2|$
- ▶  $|T| = \begin{cases} |R_i| & \text{if } T \text{ is a leaf } R_i \\ (\prod_{R_i \in T_1, R_j \in T_2} f_{i,j}) |T_1| |T_2| & \text{if } T = T_1 \bowtie T_2 \end{cases}$

- ▶  $C_{\text{out}}(T) = \begin{cases} 0 & \text{if } T \text{ is a leaf } R_i \\ |T| + C_{\text{out}}(T_1) + C_{\text{out}}(T_2) & \text{if } T = T_1 \bowtie T_2 \end{cases}$
- ▶  $C_{NL}(T_1 \bowtie T_2) = |T_1| |T_2|$
- ▶  $C_{HJ}(T_1 \bowtie T_2) = 1.2 |T_1|$
- ▶  $C_{SMJ}(T_1 \bowtie T_2) = |T_1| \log(|T_1|) + |T_2| \log(|T_2|)$

## First Greedy Heuristics

Construct a linear join tree

- ▶ GreedyJoinOrdering-1: order relations by cardinality
- ▶ GreedyJoinOrdering-2: order relations by selectivity
- ▶ GreedyJoinOrdering-3: order by selectivity, try each relation as start relation

# Homework

- ▶ Give an example query graph for which GOO does not give the optimal join tree
- ▶ Perform IKKBZ heuristic on this query and compare  $C_{out}$
- ▶ Implement a Query Graph for TinyDB

- ▶ Slides and exercises: [db.in.tum.de/teaching/ws1718/queryopt](http://db.in.tum.de/teaching/ws1718/queryopt)
- ▶ Send any questions, comments, solutions to exercises etc. to [radke@in.tum.de](mailto:radke@in.tum.de)
- ▶ Exercise due: 9 AM, November 20
